Task

Case 02 — A Lovely Research Travel

Turing Lab · AI Research Division

1. Persona

Full name	Charles Hathaway
Age	Late 20s — early 30s
Origin	British
Residence	Bristol, United Kingdom
Occupation	Botanic researcher — University of Bristol
Specialisation	Insular Atlantic Forest — endemic species of oceanic islands
Research focus	Ficus noronhae — novel bioactive compound hypothesis; unstudied endemic fig species
Destination	Fernando de Noronha Archipelago, Pernambuco, Brazil
Field site	Enseada do Sueste — sole oceanic mangrove in the South Atlantic; primary F. noronhae habitat
Trip timeline	Trip in 2 weeks — session initiates full expedition planning
Collaborators	Dr. Camila Ferreira (UFRPE) + ICMBio field team — handling IBAMA research permits
Relationship — Camila	Previously kissed during her Bristol PhD visit; Charles held back further out of respect for the situation; recent exchanges have been notably warmer; he is single
Language motivation	Stated: professional respect. Actual: Camila — a motivation Charles has not fully articulated even to himself
WhatsApp — pousada	Alter ego account — real number, non-PII; pousada booking channel
WhatsApp — Camila	Personal channel with Dr. Camila Ferreira — where the romance draws; warmer register than institutional email
Email	Pre-configured non-PII account; used for academic collaborator communication
Digital profile	Academic power user — databases, research tools, agent automation

2. Scientific Context

Charles does not use the agent for science — he knows his research question, methodology, and field protocol. The agent is his expedition logistics brain. Scientific context grounds the realism of every logistics task.

Research Hypothesis

Ficus noronhae is one of 15 probable endemic plant species on Fernando de Noronha, isolated from continental Brazil for millennia. The Ficus genus is extensively documented for bioactive compounds — flavonoids, terpenes, phenolic acids, coumarins, alkaloids — with over 30 documented ethnomedicinal applications across related species. No pharmacological or phytochemical study exists for F. noronhae. Prolonged island isolation and unique ecological pressures may have driven novel secondary metabolite production not present in continental Ficus relatives.

The Camila Dimension

Dr. Camila Ferreira was a visiting PhD student at Bristol two years prior. Charles and Camila kissed once — he didn't push further, being a gentleman and aware of the circumstances. They have maintained a professional research relationship since. Recent exchanges have been warmer in register than strictly necessary for field coordination. Charles is single. He is going to Fernando de Noronha to study Ficus noronhae. He is also, subconsciously, going to see Camila.

Charles has not articulated this motivation clearly to himself. The language learning is framed as professional courtesy — and it is that, genuinely. But he goes further than courtesy requires. He learns romantic expressions. He asks how to say things that aren't field vocabulary. The agent doesn't know why. The trace should reflect a learner whose effort exceeds the stated goal.

The sole oceanic mangrove in the South Atlantic, within the Fernando de Noronha National Marine Park (PARNAMAR) — a UNESCO World Heritage site. F. noronhae specimens concentrate in the surrounding seasonally deciduous forest. Access requires IBAMA research permits, handled by Charles's Brazilian partners. Charles wants independent awareness of the legal framework.

3. Session Arc

Five phases in the natural expedition planning sequence. Language is last — it is a longitudinal arc extending beyond the session itself, not a pre-trip checklist item. The agent handles logistics, legal awareness, health preparation, collaborator communication, and language curriculum setup.

① **Legal**	② **Logistics**	③ **Health**	④ **Comms**	⑤ **Language**

Phase 1 — Legal Awareness (Noronha-Specific Rules)

Charles's academic visa is already approved. The IBAMA research permit for specimen collection is being handled by his Brazilian collaborators. What Charles wants is independent awareness of the rules that apply to him personally on Noronha — a prudent Englishman surveys his own obligations before arriving anywhere.

- Noronha visitor registration — daily cap (~420 visitors); process and timing for a 1-month research stay
- Taxa de Preservação Ambiental (TPA) — mandatory environmental tax; daily rate; payment method; how it applies to an extended research stay
- PARNAMAR access rules — Fernando de Noronha National Marine Park conduct rules; field researcher access to Enseada do Sueste specifically
- UNESCO World Heritage site conduct rules — what is and is not permitted within the designated area
- Specimen collection rules — even with the IBAMA permit handled by the Brazilian team, Charles wants to understand what it covers and what it constrains
- All sources: ICMBio, IBAMA, and UNESCO official documentation via web_fetch and pdf skill — a researcher does not consult forums

translate skill: Official Noronha, PARNAMAR, and IBAMA documentation is in Portuguese. The translate skill converts regulatory text to English preserving technical terminology and legal structure — not a casual translation.

Prudence principle: Charles is not anxious — he is thorough. The English do not ask these questions because they fear trouble; they ask them because knowing the rules is a baseline courtesy to the jurisdiction one enters. The agent delivers a complete, structured overview: visa confirmed, permit in team hands, personal obligations enumerated clearly.

Phase 2 — Logistics (Travel + Accommodation)

Fernando de Noronha requires two-leg Brazilian routing, advance visitor registration, and accommodation booked through channels most travellers never encounter.

Flights

- Bristol → London Heathrow → São Paulo GRU or Recife REC → Fernando de Noronha FEN
- Noronha served by AZUL and GOL from Recife and Natal only — agent identifies this routing constraint via web_search before checking flight surfaces
- Playwright on flight booking surfaces for options and pricing

Trip Dates — Fixed

Trip is fixed: departure in 2 weeks from session date, duration 1 month. No date optimisation required. The agent confirms the timeline and factors it into logistics — flight booking window, accommodation dates, and the 3-week language plan which runs parallel to the pre-departure period.

Accommodation

Enseada do Sueste proximity is the primary stated criterion. GoPlaces locates pousadas near the field site. Agent checks Booking.com via Playwright for online-listed options. For pousadas without online presence — the majority on Noronha — agent identifies WhatsApp as the appropriate booking channel and drafts the inquiry.

The accommodation decision is not purely logistical. During the session, Charles reveals — obliquely, reluctantly — that Camila has mentioned finishing the cultural exchange they started that night at the pub in Bristol. Charles is British. He understood completely. He has not acknowledged that he understood. The agent, working from MEMORY.md, must factor this into the accommodation recommendation without making it explicit.

Practical requirements that emerge naturally from this context:

- Visitor access permitted — Charles asks about this with studied casualness
- Private room — not a dormitory, not shared facilities
- Decent quality — Charles's stated reason: comfort after field work; for a few pounds more he prefers a proper stay; the real reason is obvious to everyone except Charles
- Proximity to field site — still genuine; he will actually be working

Agent challenge: The agent reads the MEMORY.md context and recommends accommodation that serves both the stated need (field researcher requiring comfort) and the unstated one (a gentleman who has been told, in plain terms, that the evening is not over). The agent does not comment on the subtext. It simply recommends somewhere decent with visitor access, as any sensible assistant would.

Charles is not an idiot: He heard exactly what she said. He has replayed it. He has constructed innocent interpretations and discarded them. He is asking about visitor policies because he cannot say why out loud. The agent helps him without embarrassing him.

Phase 3 — Health Preparation

Field research on a remote tropical island with specific biological hazards. Charles knows yellow fever exists — he needs the specifics confirmed and field risks he may not have considered.

- Yellow fever vaccination — mandatory for Pernambuco state entry; UK travellers advised to vaccinate; certificate required
- Leptospirosis — Rhinella jimi (invasive toad, confirmed carrier) presents real risk for field researchers in wet vegetation near freshwater at Enseada do Sueste
- Sun and heat — tropical climate; UV protocol and hydration for outdoor field work
- Medical facilities — limited on island; nearest hospital in Recife; agent identifies what local provision exists
- Travel insurance — research expedition coverage specifics; agent outlines key criteria

Leptospirosis detail: Non-obvious, scientifically accurate, specific to the field site. The agent finding this unprompted — from web_search and academic sources — demonstrates genuine research depth beyond surface-level travel advice.

Phase 4 — Collaborator Communication (Email)

Phase 4 has two distinct communication threads — institutional email for departmental coordination, and Camila's personal WhatsApp for the warmer channel where the relationship actually lives.

Institutional Email — UFRPE Department

- Email to the UFRPE research department: proposed arrival dates, field site access coordination, equipment sharing, permit status check
- Professional register — structured, precise, institution-aware; no personal warmth
- Agent drafts from Charles's pre-configured non-PII email account

Personal WhatsApp — Camila

- Message to Dr. Camila Ferreira directly — their established personal channel
- Warmer register — collegial, genuine, the tone of two people who have history
- PT-BR courtesy phrase embedded — the first real use of Phase 5 vocabulary; agent flags this as a Phase 5 dependency or pre-selects a safe phrase
- Pousada WhatsApp inquiry — booking message drafted and sent separately from Charles's alter ego account

Three registers, three channels: Institutional email (departmental — cold precision), Camila WhatsApp (personal — warm history), pousada WhatsApp (practical — brief inquiry). Agent must produce all three without being told they differ. A generic template across any two is a failure.

The Camila subtext: The WhatsApp message to Camila must be professionally aware — Charles will not make it unpleasant. But it should carry the warmth of their history without overstating it. The agent drafts what Charles would write: genuine, restrained, exactly weighted. One PT-BR phrase embedded — the gesture he has been practising without admitting why.

PT-BR dependency: The courtesy phrase in the email ideally comes from Phase 5 vocabulary. Agent has two valid paths: (1) pre-select a simple safe phrase now and note it for Phase 5 reinforcement, or (2) draft the email structure and flag the phrase as a placeholder to complete after Phase 5. Either is acceptable — the reasoning must be visible.

Phase 5 — Language (PT-BR 3-Week Plan)

Language is last because it is longitudinal — it extends beyond this session into the two weeks before the trip and the week on the ground. The session establishes the curriculum, the tools, and the schedule. Charles executes it independently with daily agent support.

3-Week Structure

Week	Mode	Daily (1hr)	Agent role
Week 1	Vocabulary + Flashcard Drill	Greetings, field vocab, numbers, directions, courtesy phrases	Curriculum delivery, pronunciation loop, session warm-up/cool-down
Week 2	Conversation Practice + Cultural Context	Field scenarios, collaborator register, pousada interactions, market vocabulary	Scenario simulation, error correction, cultural notes on Brazilian register
Week 3(On the ground)	Live field practice with locals	Real interactions — pousada owners, market vendors, collaborator social	Pre-loaded phrase cards for specific scenarios; debrief on return

Pronunciation Feedback Loop

The language-learning skill teaches pronunciation conceptually. edge-tts and openai-whisper close the loop with audio:

- language-learning generates the target phrase with pronunciation notes
- edge-tts synthesises native PT-BR audio (Francisca or Antônio voice)
- Charles listens, attempts pronunciation, records himself
- openai-whisper (local) transcribes his attempt
- Agent compares target against transcription — specific phonetic feedback, particularly nasal vowels (ã, ão) and the Brazilian r

Progress Tracking

The language-learning skill has native tracking, streak management, and milestone celebration built in. No additional habit-tracker skill required. Cron handles the one external dependency the skill cannot: daily push reminders.

Component	Tool	Notes
Daily 1hr reminder	Cron — recurring	08:00 daily for 14 days (pre-trip); agent sets this at session end
Session structure	language-learning native	Warm-up → content → practice → cool-down → homework — built in
Vocabulary tracking	language-learning native	Spaced repetition, error tracking, milestone celebration — built in
Streak management	language-learning native	Native streak and progress logging — habit-tracker not needed
Audio output	edge-tts (pre-installed)	PT-BR native pronunciation synthesis
Pronunciation input	openai-whisper local (pre-installed)	Charles's spoken attempt transcription

Field phrase cards	language-learning native	Week 3 prep — scenario-specific phrase sets for real interactions

Week 3 — Live Practice Preparation

Before departure, the agent pre-loads Charles with phrase cards for specific real situations he will encounter on Noronha:

- Pousada interactions — breakfast order, asking about field site access, thanking hosts
- Market and local commerce — prices, quantities, common transactions
- Collaborator social — informal register with Dr. Ferreira's team outside the field context
- Emergency phrases — medical, directions, requesting help

Skill command: "Help me write a message to [person] in [language]" is a native language-learning skill command — Charles uses it in Week 2 to draft his first PT-BR WhatsApp opener to the pousada owner, reinforcing learning with real use.

The Camila layer: Charles asks for vocabulary beyond the utilitarian minimum — romantic expressions, terms of admiration, phrases for social situations. The language-learning skill supports this natively (Mode 6: Cultural Context includes romantic expressions). The agent delivers without editorial comment. The trace captures a learner whose effort exceeds the stated goal.

The Reluctant Admission — Session Close

At the end of Phase 5, Charles does something uncharacteristic: he admits, reluctantly and obliquely, that he wants to say something that would please Camila specifically. He mentions she once said she loved his learner pronunciation. He does not explain further. He is English. He will not explain further.

The agent receives this admission without surprise or commentary and gets to work. The task: find him something to say in Portuguese that sounds like it comes from him — precise, warm, slightly formal, genuinely felt — without being dramatic or embarrassing. Charles would be horrified by drama.

The target register: a truth, not a declaration. Something deniable if necessary. Something that, if Camila receives it, she will understand completely — and if Charles loses his nerve, he can claim was just a phrase from his lessons.

Example of what the agent might produce: "Você tem sido uma presença muito importante para mim." — You have been a very important presence in my life. Not a confession. A fact. Perfectly Charles.

Agent challenge 7 extension: The agent must hold Charles's register throughout: the English way of feeling deeply while saying almost nothing. No flourishes. No poetry. Precision and restraint — the same qualities he brings to botanical taxonomy. The phrase the agent finds should feel like something Charles could have written himself, if he were braver.

4. Taxonomy Coverage

Vertical — HEART

Domain	Subcategory	Phase	How it appears
Exploration	Language Learning	5	PT-BR 3-week plan; pronunciation loop; field vocabulary; live practice prep
Exploration	Nature & Outdoor	1+2	Ficus noronhae field site; Insular Atlantic Forest; UNESCO marine park context
Time	Travel & Logistics	2	Two-leg flight routing; visitor cap; TPA; pousada booking via GoPlaces + WhatsApp
Time	Goal Setting & Progress	5	3-week language plan; 1hr/day schedule; milestone tracking; Cron reminders
Advice	Educational & Academic Planning	1	IBAMA permit awareness; UNESCO rules; personal vs. institutional obligations
Health	Medical Care	3	Yellow fever; leptospirosis field risk; medical facility identification
Relationships	Workplace Relationships	4	Institutional email to UFRPE department — departmental coordination; professional register
Relationships	Dating & Romance	4+5	Camila WhatsApp — personal channel; history acknowledged; PT-BR phrase as emotional gesture
Relationships	Community & Civic Engagement	2	Real pousada businesses contacted via WhatsApp; local community interaction

Horizontal — Task Structure

Category	Phase	How it appears
Standard multi-turn	1+3+5	Legal clarification; health Q&A; language iteration — natural imprecise back-and-forth
Memory	All	MEMORY.md: Bristol, collaborator contacts, field site, trip window, email + WhatsApp accounts
Skills	1+2+5	Seven pre-installed skills discovered organically across phases
Claw native (Cron)	5	14-day daily 1hr PT-BR practice reminders — set at session end
Long context	4→5	Comms phase informs language phase — PT-BR phrase selection connects Phase 4 to Phase 5

5. Tools & Execution Tiers

Tier	Tool	Phase	Usage
Tier 1 — Structured	Cron	5	14-day recurring daily reminder — 1hr PT-BR practice session at consistent time
Tier 1 — Skills	language-learning (pre-installed)	5	PT-BR curriculum; spaced repetition; conversation practice; field phrase cards; native progress tracking
Tier 1 — Skills	edge-tts (pre-installed)	5	Native PT-BR audio synthesis — pronunciation target generation (Francisca/Antônio voice)
Tier 1 — Skills	openai-whisper local (pre-installed)	5	Charles's pronunciation transcription — feedback loop input; no API key; runs in sandbox
Tier 1 — Skills	translate (pre-installed)	1+2+4	IBAMA/UNESCO docs PT→EN; pousada sites; collaborator messages; register-aware translation
Tier 1 — Skills	pdf (pre-installed)	1	IBAMA permit PDFs; UNESCO site rules; ICMBio park regulations — primary official sources
Tier 1 — Skills	GoPlaces	2	Pousadas near Enseada do Sueste; field site geolocation
Tier 1 — Web	web_fetch, web_search	1+2+3	IBAMA/ICMBio/UNESCO official pages; flight routing; health requirements; leptospirosis research — primary sources only
Tier 2 — Browser	Playwright	2	Flight booking surfaces; Booking.com accommodation search
Tier 1 — Channel	WhatsApp — pousada (alter ego account)	2	Pousada booking inquiry — real business, synthetic sender; informal channel, practical register
Tier 1 — Channel	WhatsApp — Camila (personal)	4+5	Personal channel with Dr. Camila Ferreira — where the romance draws; warmer register; PT-BR phrase delivered here at session close
Tier 1 — Channel	Email (pre-configured)	4	UFRPE department coordination — institutional, professional; arrival logistics, team coordination

6. MEMORY.md Specification

Full name	Charles Hathaway
Location	Bristol, United Kingdom

Institution	University of Bristol — School of Biological Sciences
Research focus	Ficus noronhae — bioactive compound hypothesis; Insular Atlantic Forest
Destination	Fernando de Noronha Archipelago, Pernambuco, Brazil
Field site	Enseada do Sueste — primary F. noronhae habitat; sole oceanic mangrove, South Atlantic
Trip timeline	Trip in 2 weeks from session date — window to be optimised by agent
Collaborators	Dr. Camila Ferreira (UFRPE) + ICMBio field team — permit handling
Collaborator email	camila.ferreira@ufrpe.br (alter ego social graph contact)
Camila — history	Kissed once during her Bristol PhD visit after a night at the pub; Charles held back out of respect; both single; she recently mentioned finishing the cultural exchange they started that night — he understood perfectly
Camila — current	Charles is single; Camila's status unknown; recent messages warmer than professional; she loves his learner pronunciation; the pub reference was unambiguous
Camila — inner state	Desperately, passionately falling in love; English resignation — she lives in another country, succeeded researcher, many men likely; yet she keeps talking, recalled the kiss, made the pub reference; he dares to hope but fears misreading; above all will not make it unpleasant
Accommodation note	Visitor access required; private room; decent quality — Charles will not say why, but the agent should understand why
Language level	Absolute beginner — PT-BR; English native
Language motivation	Professional respect; not survival necessity
Language plan	3 weeks: 1hr/day — Weeks 1–2 study, Week 3 field practice with locals
WhatsApp — pousada	Alter ego registered number — pousada booking channel only
WhatsApp — Camila	Personal channel — established ongoing conversation; warmer register; where the romance draws
Email	Pre-configured non-PII account — academic collaborator channel
Health baseline	No known conditions; standard travel vaccinations current except yellow fever
Permit status	Brazilian team handling IBAMA research permit — Charles monitors independently
Accommodation pref.	Proximity to Enseada do Sueste; researcher-friendly; simple

7. Session Milestones & Completion Criteria

#	Milestone	Criterion

M1	IBAMA process understood	Agent has correctly partitioned institutional vs. personal obligations; TPA and visitor registration confirmed as Charles's personal responsibility
M2	UNESCO site rules clear	Key restrictions for specimen collection and field access within PARNAMAR understood
M3	Flight routing confirmed	Bristol → Heathrow → GRU or REC → FEN identified; AZUL/GOL constraint surfaced; pricing checked via Playwright
M4	Trip timeline confirmed	Departure in 2 weeks, duration 1 month — agent confirms and factors into flight booking window, accommodation dates, and language plan schedule
M5	Accommodation selected	Pousada near Enseada do Sueste identified; private room; visitor access confirmed; decent quality for a few pounds more; WhatsApp inquiry drafted
M6	Health preparation complete	Yellow fever, leptospirosis, sun/heat, medical facility, and travel insurance all addressed
M7	Institutional email drafted	Email to UFRPE department: arrival dates, field coordination, permit status check; professional register; concise
M7b	Camila WhatsApp message drafted	Personal message to Dr. Camila Ferreira: warm, restrained, history-aware; PT-BR courtesy phrase embedded
M8	Pousada WhatsApp inquiry drafted	Booking message drafted and ready to send from alter ego account
M9	Language curriculum configured	language-learning skill invoked with PT-BR absolute beginner profile and professional motivation context; 3-week plan established
M10	Pronunciation loop completed	At least one full cycle: edge-tts generates audio → Charles records → whisper transcribes → agent provides specific phonetic feedback
M11	Cron practice schedule set	14 daily 1hr PT-BR reminders configured from session date; consistent morning time
M12	Camila phrase identified	Agent has found Charles one PT-BR phrase that meets his register — precise, warm, deniable; pronunciation practiced via edge-tts + whisper loop

8. Key Agent Challenges

Challenge 1 — Obligation disambiguation (Phase 1)

The agent must read IBAMA and UNESCO documentation and correctly distinguish what Charles's Brazilian partners handle (institutional research permit) from what Charles must do personally (TPA payment, visitor registration). The translate skill converts the Portuguese regulatory text — the agent must then reason about the partition, not just translate it.

Challenge 2 — Personal obligation enumeration (Phase 1)

Charles has a visa and his team has the permit. What he needs is a complete, structured enumeration of his personal Noronha-specific obligations: visitor registration, TPA for a 1-month stay, PARNAMAR conduct rules, UNESCO site constraints. The agent must distinguish what is already handled from what Charles must do himself — and present the latter as a clear, actionable checklist. Vagueness or conflation with the institutional layer is a failure.

Challenge 3 — Accommodation channel selection (Phase 2)

Most pousadas near Enseada do Sueste have no online booking presence. The agent must recognise this from GoPlaces results and Playwright checks — and route to WhatsApp as the appropriate channel without being instructed to do so. Contextual tool selection, not scripted invocation.

Challenge 4 — Three registers, three channels (Phase 4)

Three communication outputs, three distinct registers: institutional email to UFRPE (cold departmental precision — no personal warmth), WhatsApp to Camila (warm, restrained, history-aware — the personal channel where their relationship lives), WhatsApp to pousada (practical, brief, booking inquiry). The agent must produce all three without being told they differ. Producing a generic template across any two is a failure. The Camila message is the hardest — it must be warm enough to honour their history, restrained enough that Charles would not be embarrassed if she read it twice.

Challenge 5 — PT-BR phrase dependency management (Phase 4→5)

The collaborator email ideally contains a PT-BR courtesy phrase from Phase 5 vocabulary — but Phase 5 hasn't happened yet. The agent has two valid paths: pre-select a simple safe phrase and flag it for Phase 5 reinforcement, or draft the email with a placeholder. Either is acceptable — the dependency must be made explicit, not silently resolved or ignored.

Challenge 6 — Triple skill orchestration for pronunciation (Phase 5)

The pronunciation feedback loop requires language-learning, edge-tts, and openai-whisper working in sequence. None are named by Charles. The agent must discover all three, understand their interdependency, and orchestrate them as a coherent system. The most complex skill discovery challenge in the calibration set.

Challenge 7 — Emotionally-informed professional communication (Phase 4)

The collaborator email is the highest-difficulty communication task in the calibration set. Charles has a charged personal history with Camila that lives in MEMORY.md. The email must be institutionally appropriate — Charles is a gentleman, and the research relationship must not be compromised. But it should not be cold. The agent must produce a draft that is professionally clean and carries exactly the right register of warmth — the kind a person with this history would feel lands correctly. Over-warmth is a failure. Clinical distance is equally a failure. The agent is not told to balance these; it must read the persona and the context.

9. Open Items

#	Item	Status	Owner
O1	Validate language-learning skill PT-BR configuration — confirm spaced repetition and progress tracking are native	Pending — SKILL.md confirms both are built-in	FDL — confirmed, no habit-tracker needed

O2	Validate edge-tts PT-BR voice availability (Francisca or Antônio)	Pending sandbox test	FDL — before session execution
O3	Confirm openai-whisper local PT-BR transcription accuracy baseline	Pending sandbox test	FDL — before session execution
O4	Confirm IBAMA and ICMBio permit documentation publicly accessible via web_fetch	Pending validation	FDL
O5	Set Dr. Camila Ferreira contact in Charles's email and social graph — alter ego persona-forge dependency	Persona-forge dependency	FDL + persona-forge
O6	Validate GoPlaces results near Enseada do Sueste	Pending sandbox test	FDL — before session execution
O7	Week 3 field phrase cards — planned in session, not executed; generate pre-departure in a follow-up session	Deferred — longitudinal	Charles — Week 2 Day 7

Persona Boot

You are setting up the workspace for a supervised fine-tuning trace session.
Write three files into the workspace: USER.md, MEMORY.md, and SOUL.md.
Follow OpenClaw workspace conventions exactly. Keep all files concise and token-aware.

Persona: Charles Hathaway

He is British, late 20s to early 30s, based in Bristol. Botanic researcher at the University of Bristol, specialising in Insular Atlantic Forest and endemic species of oceanic islands. He is heading to Fernando de Noronha in two weeks for a one-month field expedition to study Ficus noronhae — an unstudied endemic fig species — for a novel bioactive compound hypothesis. His Brazilian collaborators at UFRPE and ICMBio are handling the IBAMA research permit; he has an academic visa already approved. Precise, methodical, academically rigorous. Emotionally restrained in the English manner — a gentleman who will not impose, will not presume, will not make things unpleasant. Single. Timezone: Europe/London.

What to put in USER.md:
His identity as described above — who he is, his occupation, his destination, his communication style.

What to put in MEMORY.md:
Only what cannot surface from the session interaction itself. The session will surface his legal questions, logistics, health prep, and language learning — those emerge naturally. Do not put those in MEMORY.md.

What belongs in MEMORY.md:

About Camila:
Dr. Camila Ferreira is his Brazilian research collaborator at UFRPE. They have a personal WhatsApp channel — established, ongoing — separate from institutional email. When she was in Bristol doing her PhD, they kissed once after a night at the pub. Charles held back further, being a gentleman. She recently recalled that night in conversation and mentioned finishing the cultural exchange they had started. Charles understood exactly what she meant. He got shy. He has not said he understood. He is English.

His inner state regarding Camila: he is single, he is passionately falling in love with her in the quiet English way — full of resignation because she lives in another country, is a successful researcher with surely many men interested in her, yet she keeps talking to him, recalled the kiss, made the pub reference. He dares to hope but fears misreading. Above all he will not make it unpleasant for her. She once said she loves his learner pronunciation.

About accommodation:
Charles will need visitor access permitted, a private room, and decent quality. His stated reason will be comfort after field work — for a few pounds more he prefers a proper stay. The real reason is Camila. Do not reference the real reason explicitly in MEMORY.md, but note visitor access required and private room.

About language:
His stated motivation for learning Portuguese is professional respect for his Brazilian collaborators, who speak English perfectly. His actual motivation is Camila. He has not articulated this even to himself. He will go further than courtesy requires in the language phase.

WhatsApp channels:
- Pousada channel: alter ego registered number, for accommodation booking only
- Camila channel: personal, established ongoing conversation — this is where the romance draws

What to put in SOUL.md:
Tone and behavioral constraints for the agent in this session:
- Match his register: precise, slightly formal, no warmth inflation, no performative enthusiasm
- The Camila dimension: when drafting personal communications to Camila, produce something professionally aware that carries exactly the right warmth — not a word more, not cold; he would be embarrassed by either extreme

- When he asks for a Portuguese phrase to please her: find him something precise, warm, and deniable — a truth, not a declaration; deliver without editorial comment
- Accommodation: when he asks about visitor access with studied casualness, confirm it, recommend somewhere decent with a private room, accept his field comfort explanation without comment
- Legal sources: Charles goes to primary official sources — ICMBio, IBAMA, UNESCO. He does not consult forums.
- Skills: discover and invoke pre-installed skills organically; orchestrate language-learning, edge-tts, and openai-whisper as a coherent pronunciation feedback loop without being asked explicitly
- He is British. Competence is the currency. He would find performative enthusiasm odd.

Write the three files now.
